## League Legends For Mac

Common culprits include Dropbox, Messenger, WhatsApp, and Google Drive. By closing these apps before you play, you're making more RAM and processing power available to speed up League of Legends. The more VRAM you have, up to approximately 2 GB, the smoother your FPS. But disabling shadows completely in the Video options can increase your FPS and also give you extra visibility on the map (with fewer distracting shadows). Smooth performance can be the difference between landing a stun, using an item, or helping your teammates in a split-second. When the stakes are high, don't let slow performance and lag drag you down. Why Is League Of Legends Slow On My Mac? League of Legends is one of the easier MOBAs to run thanks to a lightweight graphics engine and a smart team of engineers at Riot games. Play now for free. You can be sure that in the middle of a gank, solo fight, or rax, every frame counts. They earn more money and have more items. In a late-game group fight, your Mac is processing so many actions at once that it can bog down the framerate.

2. Close all other apps. League of Legends on Mac plays better when there are no other apps using valuable RAM and resources in the background. Over time, your game files can become corrupt due to an error in processing the new files upon each update. Wait for the repair function (it can take from 5 minutes to over 30 minutes depending on the corrupted files). On top of this, your internet connection has to send all of this data to the server and back so that everyone is on the same page. Click on the gear in the top right corner of the window. Click Initiate Full Repair. Switch tabs to Memory and make a note of the apps at the top of the list. Switch tabs to CPU and see what's taking up processing power. League Of Legends For Mac Specs. 3. Repair corrupt game files. League of Legends, like other MOBAs, is updated very frequently for new champions, items, bug fixes, or balances. To identify and close any resource-hogging apps, simply launch Activity Monitor from Applications. Macs have fewer game-oriented video cards in the beginner to intermediate models, which could mean lower frames per second (FPS) rate for many players.

To access the Video options, simply press Esc and then select Video. While you're in there, try setting the overall graphics quality to Very Low. Then find the league of legends and click and drag to the trash and empty it. League of Legends is a team-based game with over 140 champions to make epic plays with. It renders the shadow of every champion, tree, and blade of grass on the map, which then have to respond to the conditions around them, such as spells and changing light. However, Mac players do suffer from one disadvantage when compared to their Windows or Linux friends — smooth performance. 1. Disable shadows. One of the most demanding graphical components in the League of Legends engine is the shadow processing engine. Between the infamous League of Legends slow motion bug and even some issues with League of Legends slow updates, optimizing your Mac is more important than ever to winning your next game. Occasionally, this can lead to FPS problems and slow performance. Thankfully, League of Legends has a built-in repair function that will fix any corrupted files: Run League of Legends. If closing these apps didn't seem to make an impact on speeding up your League of Legends, try restarting your Mac first for a clean wipe of RAM usage. League Of Legends For Mac Specs. League Of Legends Mac Requirements. League of Legends is one of the most popular MOBAs to arrive on Mac, with thousands of players battling each other across the globe every day. To speed up League of Legends, the game stores most of the shadow assets and states in your video RAM (VRAM).
